

SENSEM
SYSTEMS FOR CONTINUOUS SPACES

CONTINUOUS SPACES

SENSEM is design, is innovation.

An original system of hidden frames for doors that leaves behind the limitations of the traditional frames system, opening the doors of imagination of the best architects and decorators in the design of continuous spaces visually pure and minimalist.

**Designed by Fran Silvestre Architects*

OUR COMPANY

Experience and dedication.

SENSEM has been dedicated for more than 80 years to the treatment of products from Wood. Our experience and knowledge pushes us to go on progressing and looking for the best way of optimising the craft and quality of our products.

**Designed by Fran Silvestre Architects*

PIVOT DOORS

Pivot doors cause a greater visual impact.

This opening system has two pivots, one of them located in the upper side and the other one in the lower side.

Pivots are located from the side of the frame between 8 and 30 cm. depending on the width of the door.

**Designed by Fran Silvestre Architects*

**Designed by Fran Silvestre Architects*

Minimalism. Details matter. Everything has a meaning within the strength of a system patented and tested properly. Everything that is superfluous disappears and the purpose thrives.

DOORS WITH HINGES

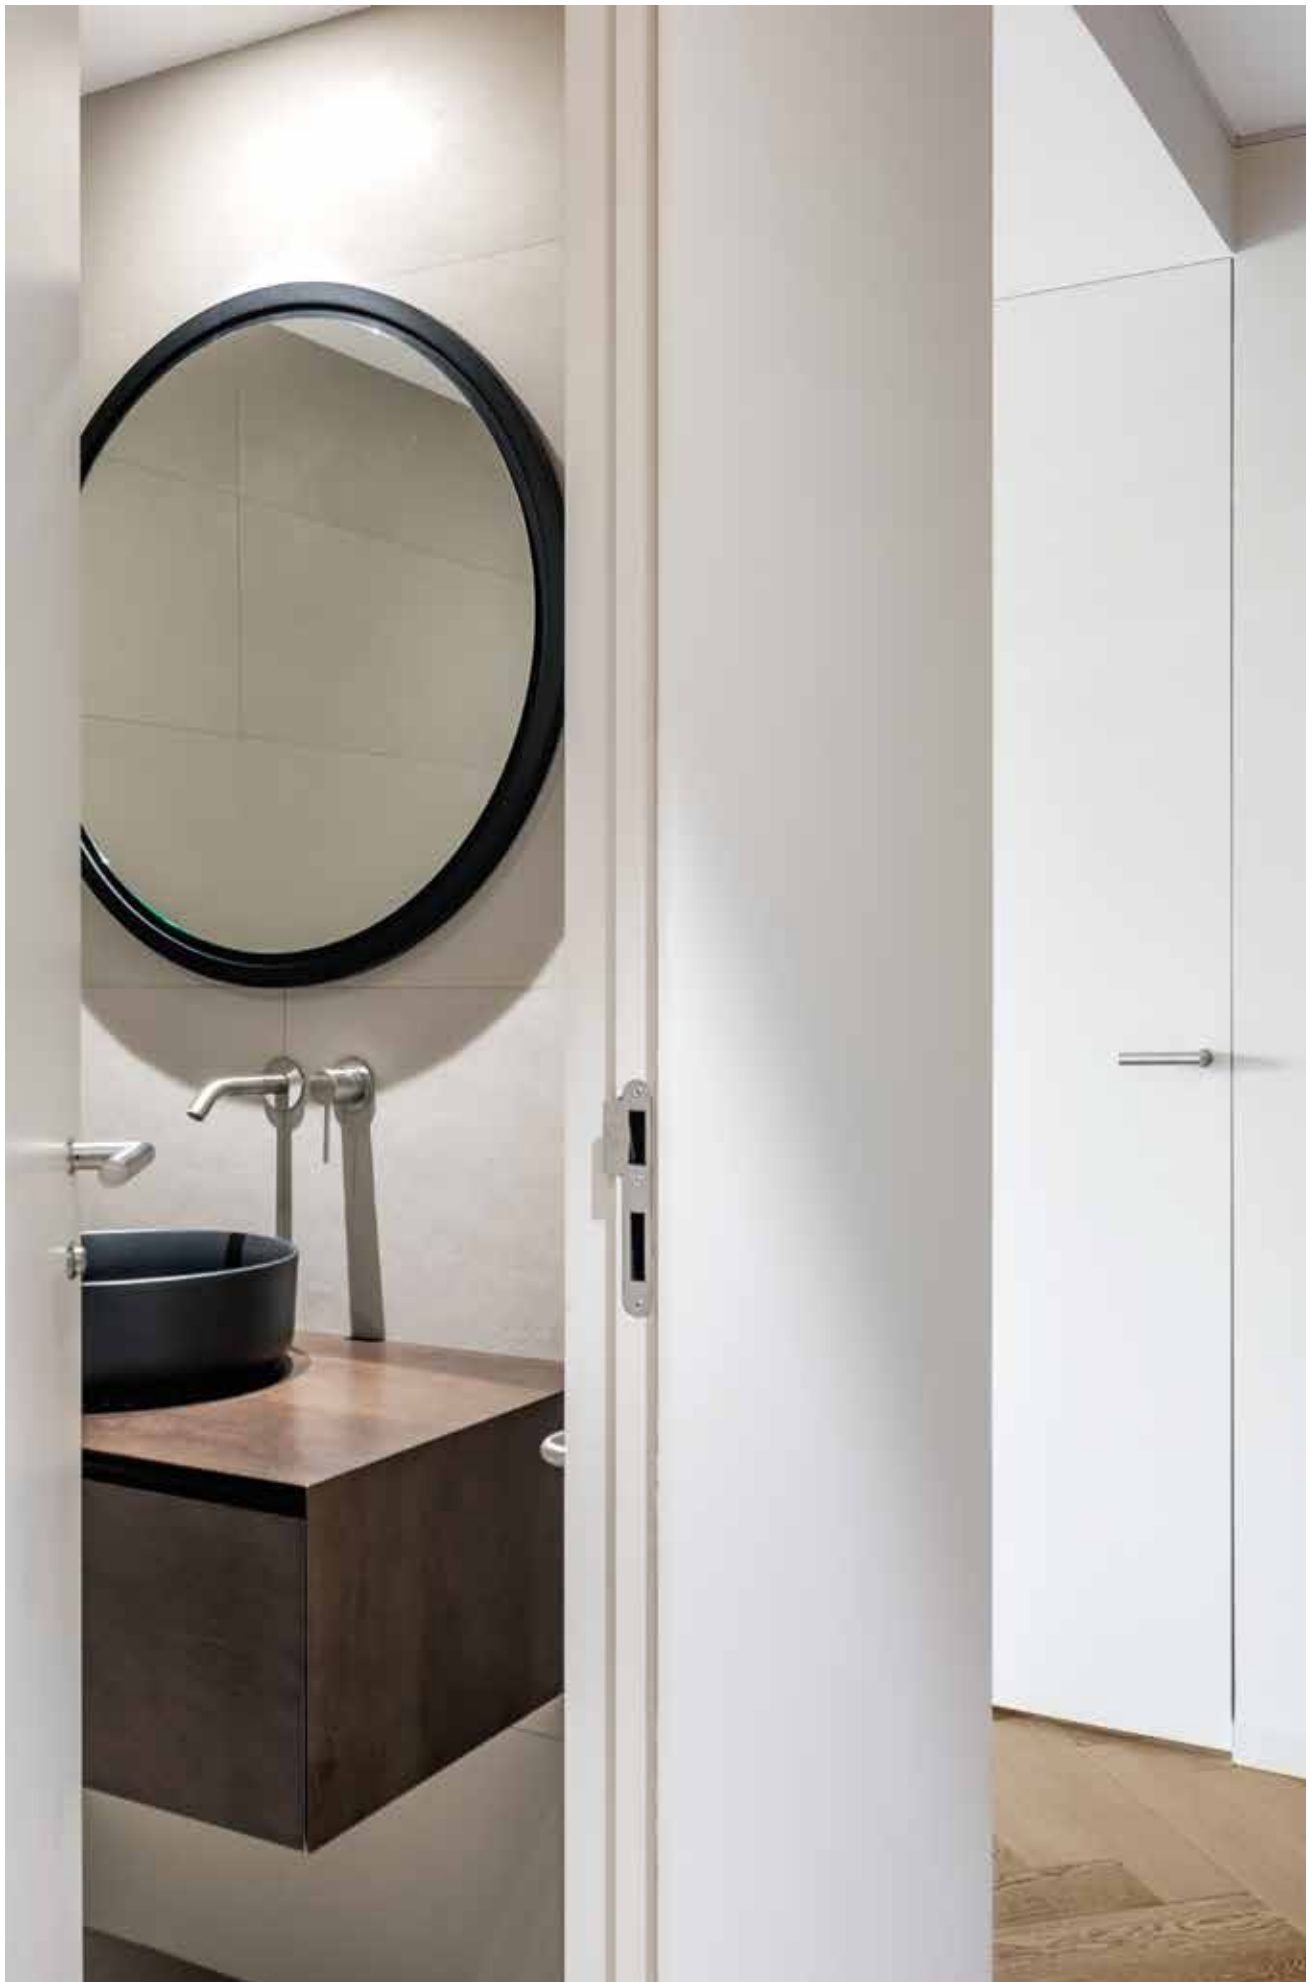

These doors work with, at least, 2 hinges located 25 cm. from the upper and lower axis.

Hinges are installed in the same frame and side of the door so the loss of the crossing space is minimum.

The possible bending of the door is minimised by the fastening of the door in the frame by our hinges Simonswerk. SENSEM only uses the best materials available in the market for its doors.

Flexibility. The fitting of the doors to the measurements and the bilateral planning with the surface allows the integration of every door with the environment, creating pure and visually clean spaces.

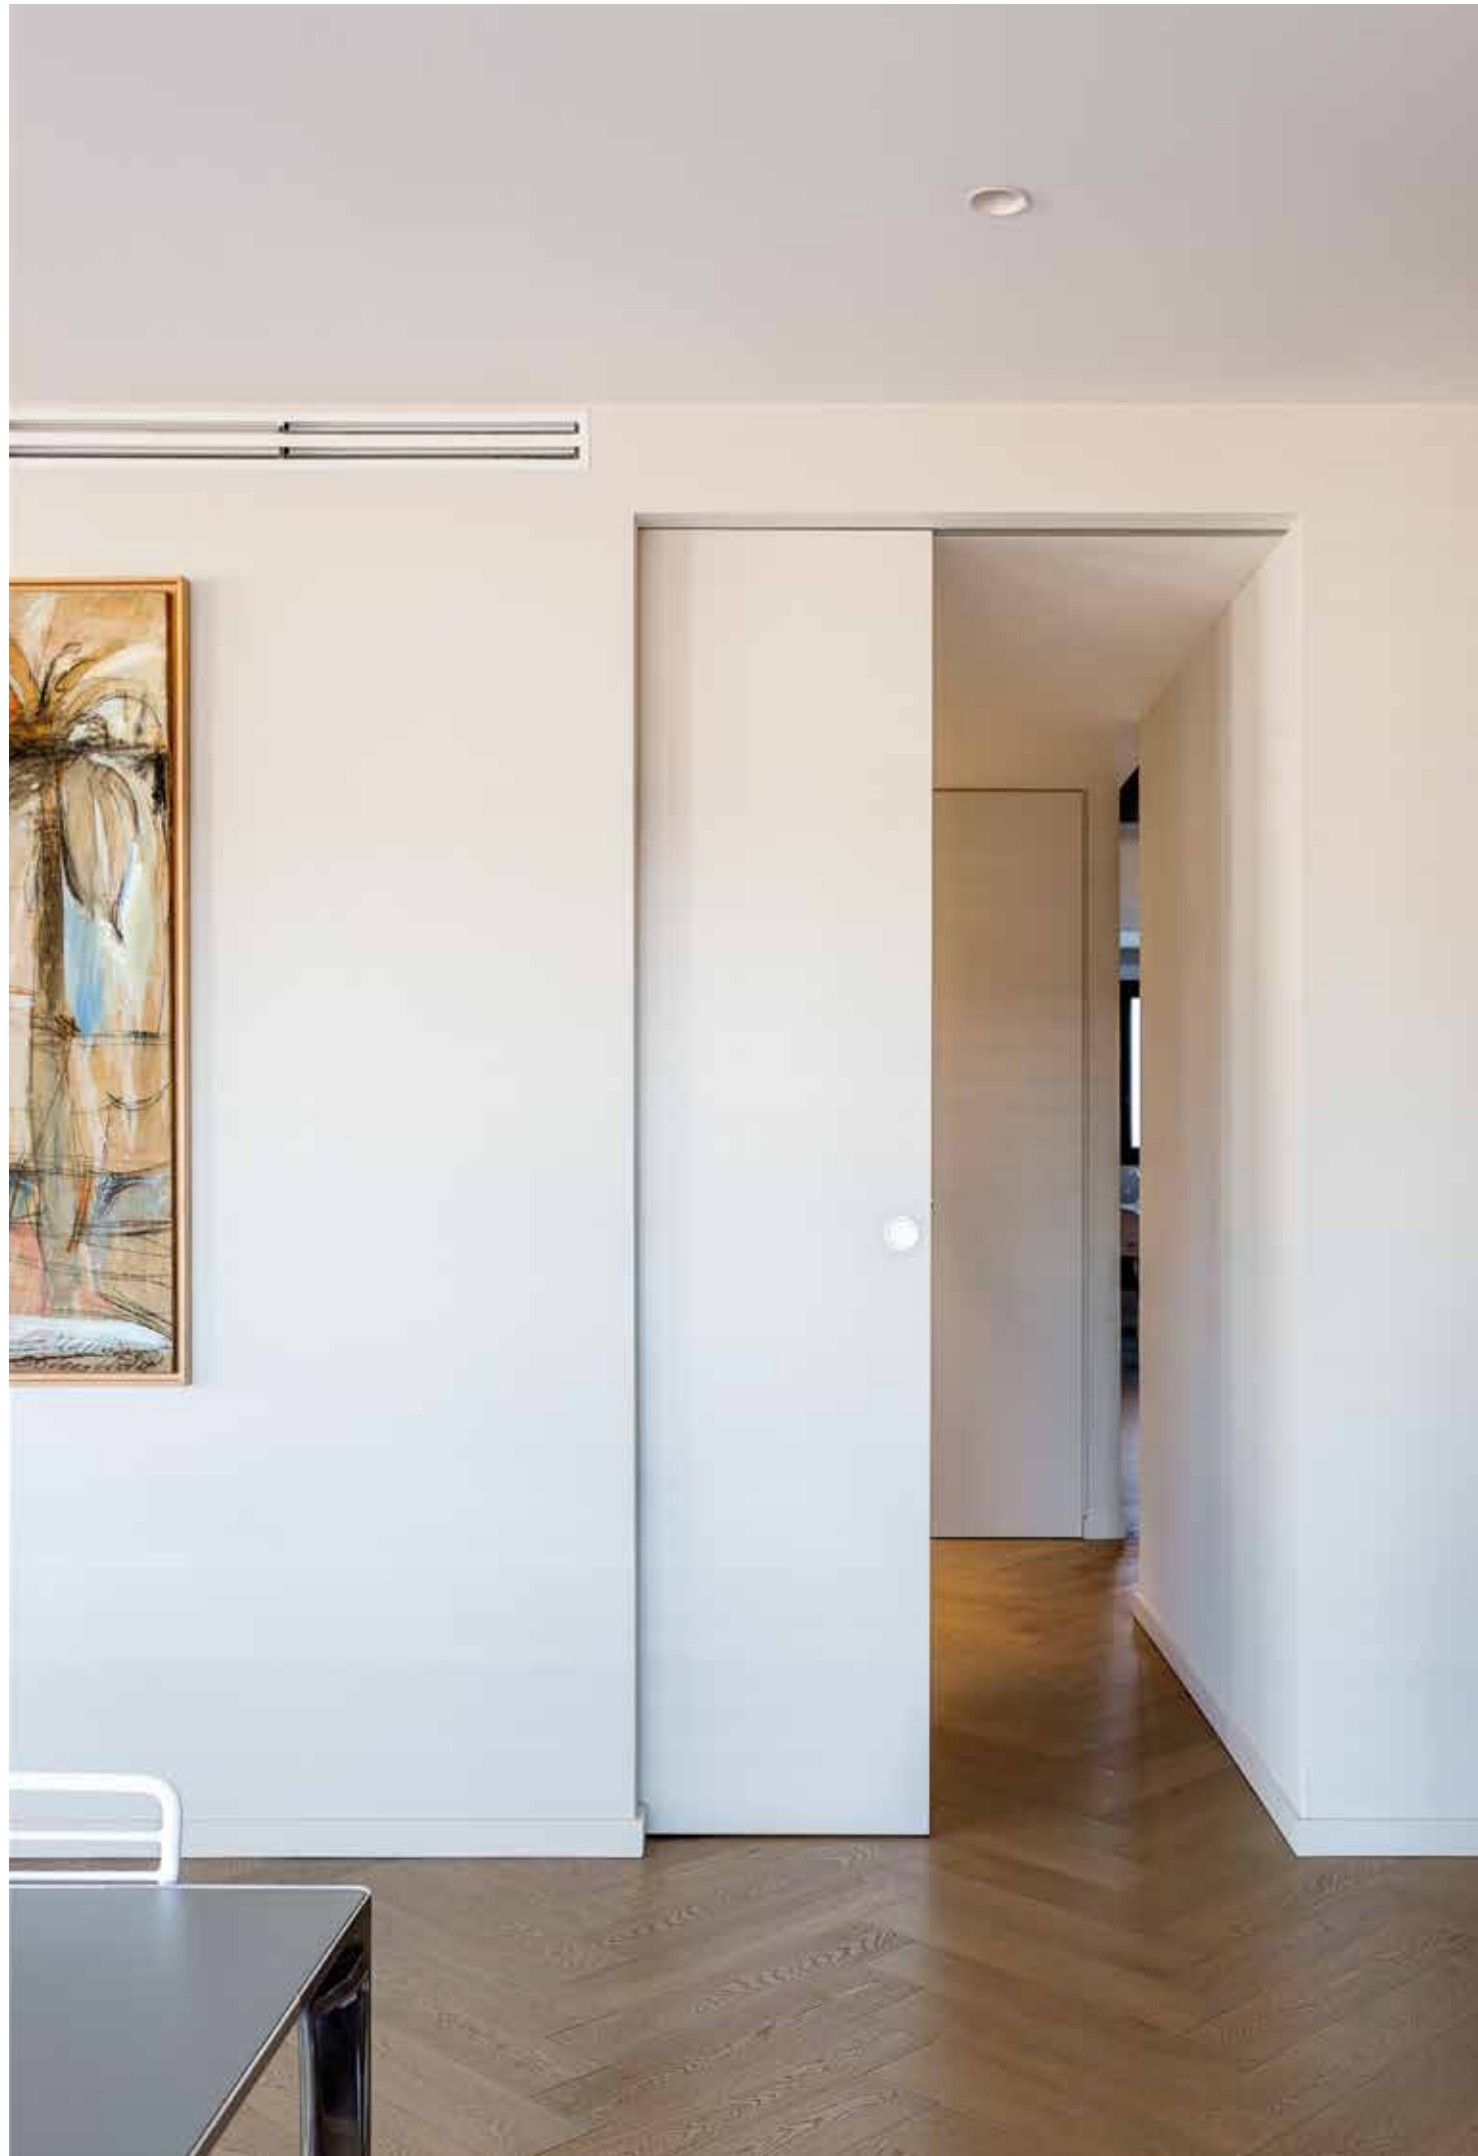

SLIDING DOORS

Due to our frame skeleton Linear, that absolutely eliminates doorjamb and joints, we are able to offer hidden sliding doors.

An innovative solution which unifies, harmonises and eases the lines of the most prestigious rooms to the maximum.

Excellence. Quality over quantity. We invest in the best materials and products in order to get the best results in modern and elegant spaces.

FIREWALL DOORS

Our last novelty has been applying our system of hidden frames to firewall doors.

These kinds of doors are designed for hotels and shopping centres, and to those cases where this firewall capacity is required.
